

Vanguard PRIMECAP Fund

Domestic stock fund | Admiral™ Shares

Fund facts

Risk level Low <-----> High					Total net assets	Expense ratio as of 01/31/23	Ticker symbol	Turnover rate	Inception date	Fund number
1	2	3	4	5	\$65,545 MM	0.31%	VPMAX	3.9%	11/12/01	0559

Investment objective

Vanguard PRIMECAP Fund seeks to provide long-term capital appreciation.

Investment strategy

The fund invests in stocks considered to have above-average earnings growth potential that is not reflected in their current market prices. The fund's portfolio consists predominantly of mid- and large-capitalization stocks.

Growth of a \$10,000 investment: January 31, 2014–December 31, 2023

Annual returns

Total returns

Periods ended December 31, 2023

	Quarter	Year to date	One year	Three years	Five years	Ten years
Fund	9.98%	28.18%	28.18%	9.88%	14.76%	13.07%
Benchmark	11.69%	26.29%	26.29%	10.00%	15.69%	12.03%

The performance data shown represent past performance, which is not a guarantee of future results. Investment returns and principal value will fluctuate, so investors' shares, when sold, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data cited. For performance data current to the most recent month-end, visit our website at vanguard.com/performance. The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index.

Figures for periods of less than one year are cumulative returns. All other figures represent average annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. All returns are net of expenses.

Plain talk about risk

An investment in the fund could lose money over short or long periods of time. You should expect the fund's share price and total return to fluctuate within a wide range. The fund is subject to the following risks, which could affect the fund's performance:

Stock market risk, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.

Asset concentration risk, which is the chance that, because the fund tends to invest a high percentage of assets in its ten largest holdings, the fund's performance may be hurt disproportionately by the poor performance of relatively few stocks.

Investment style risk, which is the chance that returns from large- and mid-capitalization growth stocks will trail returns from the overall stock market. Large- and mid-cap stocks each tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years. Historically, mid-cap stocks have been more volatile in price than large-cap stocks. The stock prices of mid-size companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.

Manager risk, which is the chance that poor security selection will cause the fund to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investments in the health care and information technology sectors subject the fund to proportionately higher exposure to the risks of these sectors.

Note on frequent trading restrictions

Frequent trading policies may apply to those funds offered as investment options within your plan. Please log on to [vanguard.com](https://www.vanguard.com) for your employer plans or contact Participant Services at 800-523-1188 for additional information.
